

## 2006 Roadtrek 190 Popular

This 19 foot camper van, has 74,100 miles, is in very good condition, and has several recent upgrades. It is built on a Chevrolet 3500 chassis, with a 6L V8 300 hp gasoline engine. The van had 47,000 miles when we purchased it in May of 2018, from the original owners, who lived in Grand Rapids MI. They used the van to spend the winter months in Florida. During the years they didn't go south, they had it winterized and stored in a garage from November until early May.

During the six years that we have owned the van we drove it an additional 27,000 miles. Our four month trip to Alaska in the summer of 2019 accounts for 15,000 of that 27,000 miles.

During the year prior to our Alaska trip we made several upgrades.

8/1/2018	Replaced air conditioner/heat pump	\$1,569
8/21/2018	Replaced control board for Domestic Refrigerator	\$ 266
12/11/2018	General service and repair of RV systems	\$ 484
6/10/2019	Installed Soft Start to AC unit	\$ 406
	Total	\$2,725

We completely fell in love with our Roadtrek during our trip to Alaska. It drives and rides like a dream. It can easily be parked in any municipal parking spaces. It has a very comfortable floor plan, with surprisingly generous storage space. The kitchen space includes a hot and cold water sink, 2 burner gas stove, refrigerator/freezer, microwave, ample counter space and plenty of storage space. The bed is a generous queen size, and can be easily converted to a very comfortable 2 sofa sitting/reading space with side table and 2 drawers. The head includes its own space, and includes a shower head with wrap around curtain for showering. There's also an outdoor shower with hot and cold water. The interior lighting is bright and in just the right places. The window lighting is good too and each window includes curtains for privacy and protection from too much sunlight. There's also an exterior awning for sun protection when sitting outside.

One of the best aspects of the van is its size. The van is big enough inside to feel comfortable, yet small enough for campgrounds to almost always find you a spot, no matter how full they are. Time after time on our Alaska trip we would go to a campground with a no vacancy sign, and end up in a cozy corner, or a tent spot. The smaller size also helps with gas mileage. It seemed whether we were going 45 MPH, or 75MPH we would always get about 15 MPG. With the 31 gallon gas tank, that gives you over a 400 mile range between gas stops. And it's a real powerhouse, the engine power is more than enough to take the steep grades of the Alaskan and Canadian mountains. We came home from our trip thinking it was the perfect camper for two people.

\$49,000.
